# How to take great pictures of medications (the right way) and upload directly into QSMobile

1. To capture the best medication picture possible, consider these tips when using a device's camera:
   a. Take picture in an area with good lighting and do not use camera flash
   b. Place medication on a solid background and position the camera so the medication is centered in the frame
2. Compass expects these steps to be followed when taking pictures of pills: *1.) If a pill includes markings on both sides, include 2 pills side by side to display both sets of markings in the picture. 2.) If a pill does not include any markings, or only on one side, take picture of only one pill*. See examples:

   i.
3. Once the picture of the medication has been taken, enter the Clients module of QSMobile and select the appropriate person. Then, tap the 3 horizontal lines and select RX's from the menu list. Choose the medication that requires a picture.

   a.
4. An image of a pill bottle will display by default. Tap the image to choose the upload method. If the picture has already been taken, select Gallery to find and upload the picture from the device.
